**Roughly 24% of jobs globally exposed to generative AI**

14 May 2026

**An estimated 24% of jobs worldwide are likely exposed to genAI**  
Global estimates of occupations potentially exposed to genAI (% of employment)

**Source:** ILO - CC BY 4.0 - Gmyrek, P., Berg, J., Kamiński, K., Konopczyński, F., Ładna, A., Nafradi, B., Roslaniec, K., Troszyński, M. (2025). *Generative AI and Jobs: A Refined Global Index of Occupational Exposure*, ILO Working Paper 140 (Geneva, ILO). <https://doi.org/10.54394/HETP0387>; BofA Global Research

Note: "High exposure" means job's tasks have high potential to be automated by AI tools, while "low task variability" means most tasks in that job look alike as they are repetitive, predictable.

BANK OF AMERICA INSTITUTE

According to the International Labour Organization (ILO), roughly one in four jobs globally are exposed to generative AI (genAI), meaning some of their tasks can be done or supported by AI. Exposure tends to be greatest in higher-income countries, where non-routine cognitive work is more prevalent, and falls to about 11% in lower-income countries.

From a regional perspective, genAI exposure is highest in Europe and Central Asia (31.7% of jobs), followed by the Americas (28.8%), Arab States (24.9%) and Asia-Pacific (APAC) (22%). However, BofA Global Research notes that relative shares alone understate the global impact: because a disproportionate amount of employment is concentrated in APAC, about 442 million jobs there could face some level of exposure – roughly equal to all other regions combined.
